CYLINDER DESCRIPTION:

In the cylinders of this type, working motion in both directions (extension and return) is undertaken as a result of the working medium (e.g. hydraulic oil under pressure) alternately on both surfaces of the piston.

SHJ1 – The cylinders are mounted to the object/device using fixed rod eye on the base of the cylinder with an embedded cylinder sleeve (swinging mounting). Such solution require precise guidance of the piston rod end in the kinetic system of the object (machine, device), excluding lateral forces in the plane perpendicular to the plane of the piston swing movement.

SHJ2 - The cylinders are mounted to the object/device using a fixed rod eye on the base of the cylinder with an embedded GE slide plain bearing. This solution allows for some slight lateral angular deviations of the cylinder during operation. The permissible deviations are provided in the catalogue sheets of bearings.

Hydraulic diagram:

An example of symbols on the Hydraulic cylinder with single-end piston rod with articulated mounting (slide plain bearing in the base of the cylinder), construction type C, with a nominal pressure 16 MPa, with a piston rod diameter 100 mm, piston rod diameter 50 mm, piston stroke 630 mm, with an extended piston rod by 70 mm, breaking screws of piston from the cylinder base, not regulated from the side of the cylinder head, piston rod ended with screwed-on or screwed-in eye.

SHJ2 – 16 – 100/50 – 630/70 – u

Explanation of symbols:

Operating medium	hydraulic oils with a viscosity of 10 - 450 mm² / s
Nominal Pressure	20 MPa
Oil purity class	20/18/15 according to ISO 4406
Operating temperature	-30 to 80 °C
Maximum operating speed	0.5 m/s
Piston rod shell	Technical chrome 25 um +/- 5um (over 20 mm in diameter)

- Piston hydraulic cylinder with single-end piston rod
- Articulated mount
- Nominal Pressure (MPa)
- Piston diameter (mm)
- Piston rod diameter (mm)
- Piston stroke (mm)
- Piston rod extension (mm)
- End of the piston rod with screw-on or screw-in ear
