CYLINDER DESCRIPTION:

The cylinder with swinging mounting, on the side pins Relatively wide spacing of the cylinder mounting points (side pins) allows to treat such a cylinder as a stabilising element of the kinematic system of the object.

The placement of the side pins closer to the piston rod results in the increase of the strength of the cylinder against buckling without the need to increase the diameter of the piston rod. The cylinders of this type, ended with forged or welded eye, are made for the work in especially difficult conditions in terms of robustness (shock loads).

Hydraulic diagram:

An example of symbols on the Hydraulic cylinder with single-end piston rod with articulated mounting (slide plain bearing in the base of the cylinder), construction type C, with a nominal pressure 16 MPa, with a piston rod diameter 100 mm, piston rod diameter 50 mm, actuator stroke 630 mm, with an extended piston rod by 70 mm, breaking screws of piston from the cylinder base, not regulated from the side of the cylinder head, piston rod ended with screwed-on or screwed-in eye.

Explanation of symbols:

Operating medium	hydraulic oils with a viscosity of 10 - 450 mm² / s
Nominal Pressure	20 MPa
Oil purity class	20/18/15 according to ISO 4406
Operating temperature	-30 to 80 °C
Maximum operating speed	0.5 m/s
Piston rod shell	Technical chrome 25 µm +/- 5µm (over 20 mm in diameter)

- Piston hydraulic cylinder with single-end piston rod
- Articulated mount
- Nominal Pressure (MPa)
- Piston diameter (mm)
- Piston rod diameter (mm)
- Piston stroke (mm)
- Piston rod extension (mm)
- End of the piston rod with screw-on or screw-in ear

SHJ2 - 16 - 100/50 - 630/70 - u
